

CALL FOR PAPERS

ACM Transactions on Design Automation of Electronic Systems

Committed to advancing the skills and knowledge of electronic design automation professionals and students throughout the world

Editor-in-Chief

X. Sharon Hu, University of Notre Dame, United States

Senior Associate Editors

David Z. Pan, University of Texas at Austin, USA

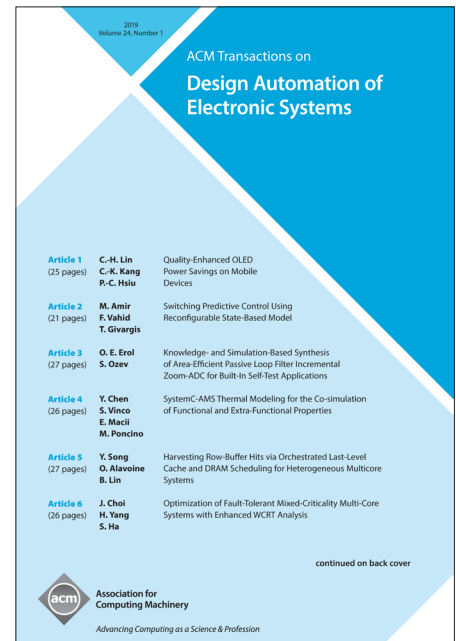

Joerg Henkel, Karlsruhe Institute of Technology, Germany

Information For Contributors

ACM Transactions on Design Automation of Electronic Systems (TODAES)

publishes recent significant results of research and development efforts in the area of design automation of electronic systems. The TODAES editorial board invites submissions of research papers, tutorial and survey papers, and short technical notes. The journal intends to provide a comprehensive coverage of innovative works concerning the specification, design, analysis, simulation, testing, and evaluation of very large scale integrated electronic systems, emphasizing a computer science/engineering orientation. Topics include, but are not limited to:

- Analog/Digital Design, Analysis, Simulation, and Synthesis
- Design Automation of Things
- Embedded System Software and Cyberphysical Systems
- Low-Power Circuits and Systems
- On-Chip and System Architectures and Design
- Physical Design and Design for Manufacturability/Reliability
- Security for Design Automation
- Testing, Validation and Verification
